Academic and Research Impact of the Dept of Economics,
University of Crete, 1988-2013

Nikolaos Giannellis, Pantelis Kalaitzidakis, Giorgos Stamatopoulos and Vangelis Tzouvelekas
Summary

This report analyzes the evolution of the academic and research impact of the Department of Economics of the University of Crete since it was first established. We focus on the two main outputs generated by faculty members in academia: publication record (including journal papers, books, conference proceedings and chapters in collective volumes) and research funds raised. The necessary data for the first category are obtained from University of Crete Library which runs a three-year project financed by the Ministry of Education one of whose activities is to collect data on publications made by all faculty members using all the available electronic databases together with individual CVs. Data for research grants are obtained from the University of Crete Research Committee which keeps a detailed record on the research grants obtained by faculty members of the Department. Both databases refer to the period 1988-2013. As a first step, with the assistance of the University’s administration we obtained information on faculty members who served in the Dept. of Economics during the 1988-2013 period. Then from the Library’s database we used only the published work of the aforementioned faculty members that indicated the University of Crete as their affiliation. Journal papers produced by all faculty members have been weighted using SCImago Journal and Country Rank which was suggested by the Library as being in our case the most complete and reliable database of journal’s impact factors. In summary, the SCImago Journal and Country Rank is a portal that includes the journals and country scientific indicators developed from the information contained in the Scopus database (Elsevier B.V.). This indicator shows the visibility of the journals contained in the Scopus database from 1996. It expresses the average number of weighted citations received in the last three years by the documents published in the journal in the three previous years.\footnote{More information on the index construction can be found in Guerrero-Botea and Moya-Anegon (2012). A Further Step Forward in Measuring Journals' Scientific Prestige: The SJR2 Indicator. Journal of Infometrics, 6: 674-688.} In essence it provides a measure of potential citations received by published articles in the future. Finally, flows of research grants were converted to constant 2005 prices using the GDP deflator published by the World Bank. Research funds referring to developing basic infrastructure (internship and career offices, curriculum etc.) were excluded from the analysis.

1 it should be noted that not all journals from the publication record appear in the SCImago Journal and Country Rank database; 2 this is the average impact factor generated each year by the Department calculated as the number of weighted papers over the unweighted ones.
